What's New in the?

The PlayWav is an easy and fun way to record a live performance. It is a simple stand-alone application which makes it possible to record anything you play through it. Just set the parameters and play, it does the rest. Make a Live Band CD in two minutes. With the PlayWav applications you can add special effects to your live performance. You can save what you play as an MP3 or WAV file and edit the files before you record them, so you can add special effects, instruments and so on. The information about the recording will show in the WAV file's properties, and you can even change it before you record. Live Recorder Description: Live Recorder is a standalone application designed to be a simple stand-alone recording solution. A simple interface with three tabs where you can enter all the necessary information. Three buttons help you to start, stop, and pause the recording when necessary. Live Recorder is a simple application that records any sound into files. The audio input is set with microphone or the line-in. After the recording it is possible to change the format of the WAV file, or add special effects before you save it. Effect Description: There are two versions of Effect: instrument and effect. Effect is a Monosynth effect module that can be used as an insert to process external audio through the filter and to control the filter envelope. The instrument version is the same module, but is also connected to the Monosynth host, which means that it is possible to send automation to the Monosynth. In addition, you can use the Monosynth to control the effect with external MIDI controllers. The machine is set for MIDI to CV control. It is possible to send automation to the effects from midi controllers. Effect has one more settings available for the modulation source. Also the effects are sequenced before they are applied to the recording. It is possible to record audio as WAV or MP3 (16 bit stereo.wav or mono.mp3) The application name is Machine, which is connected to the Monosynth through the instrument, or Effect, version. In addition, it is possible to send the automation of effect to the CV module before the recording. This means that you can send automation to the effect from external MIDI controllers such as Monocontrollers, Monotron designers made by Roland.
