A: What you are looking for is probably the file (Cracked Kontakt). Go to the Kontakt section in the KLDB documentations to read how you can install it (last section: How to install a kontakt library). EDIT: Let's suppose you have a library file (1) and its file extension is "libxxx.dll". "libxxx.dll" is the "DLN". You will need a proper DLN : libxxx.dll To give it a DLN, go to File → Add Library from the Kontakt Menu, and put the file in the "All Library Files" section. Make sure you have a "small generic libxxx.dll", or something close, because a DLN have to be a proper library. A proper DLN is for instance : libxxx.dll, not libxxx.lnk, libxxx.lnk, or libxxx.exe. I hope this can help you EDIT 2: I'm sure it's a simple thing, but I don't understand it... Maybe it is due to the fact that I use Windows, but from what I've seen, libxxx.dll are only Microsoft's.dll files. This is a tutorial I found, but it should help you too: How to convert a.lib or.dll file into a.dll 1cb139a0ed
