your sajna tere pyar mein mp3 video file. D. C. Wheeler, H. R. Welty, H. D. Wahl, and G. H. Smith., 45:649-655, 1971. D. C. Wheeler, H. R. Welty, and G. H. Smith., 28:355-365, 1971. D. C. Wheeler and H. R. Welty., 58:183-200, 1971. [^1]: Corresponding author. Trabecular microfracture associated with healing myotendinous junction injury. Skeletal muscle injury has been attributed to microfracture, the initial breakdown and injury of the membrane of the extracellular matrix through a perforating hole. A 17-year-old white boy experienced a twisting injury of his right ankle during basketball practice, resulting in a bilateral disruption of the musculotendinous junctions and a fracture of the lateral malleolus of his right ankle. The myotendinous junction injury healed with a unique midline excisional biopsy of the distal calf muscle, which had a gaping hole in its midstirdal border of the perimysium, the site of the injury, causing the syndrome of "microfracture of the myotendinous junction." We appreciate the kind comments on our paper. We agree with the reviewer that effects of inhibition in the bistratified cells may be described also by similar Hill curve and we also provide a Hill curve of inhibition in [Author response image 1](#respfig1){ref-type="fig"}. ! [A potential Hill curve based on the assumption that inhibition acts on P2X receptors to the same extent in the two cell types with two different efficacy.\ The curve is slightly shorter in the bistratified cells compared to that of the monostratified cells.](elife-39270-resp-fig1){#respfig1} \* c6a93da74d
